

3. JavaScript (JS)

👉 Definition:

JavaScript is used to make websites interactive and dynamic.

💡 What JavaScript Can Do

Show alerts

Validate forms

Create animations

Handle clicks and buttons

Update content without reloading

🔧 Example

HTML

```
<button onclick="showMessage()">Click Me</button>
```

```
<script>
```

```
function showMessage() {  
    alert("Hello User!");  
}
```

```
</script>
```

📌 DOM (Document Object Model)

👉 JS can control HTML elements:

JavaScript

```
document.getElementById("demo").innerHTML = "Hello!";
```

🔄 Events in JS

onclick

onmouseover

onkeyup

Example:

JavaScript

```
function changeText() {  
    document.getElementById("text").innerHTML = "Changed!";  
}
```

}

Key Points

JS = functionality & interaction

Works with HTML & CSS

Makes website dinamically
